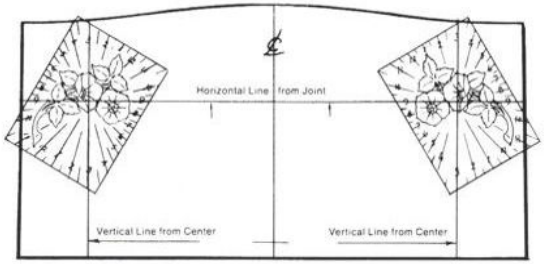
INSTRUCTIONS FOR STENCIL CUT CARVINGS



For corner carving, locate the position of the left cutting die and stamp it out — then make a rubbing of the stamped out design with the outline of the top and end of die and transfer it to the stencil, using the outline of the top and end, and rubbing to locate the exact position for the right side cutting die. Then lay the right cutting die over where the rubbing was rubbed off on the stencil. This will give you the correct position of the right cutting die. Place the 2 pieces of stencil on the die, using the outline of face marked on stencil. This should give you the exact position of corner carvings. Connecting lines can be cutout right on the die.

We have adopted the same method of locating floral patterns on the stencil to be cut as the Gaspari method. If entire face of die to be carved and lettered, we suggest you cut the stencil to cover the face of the die — then mark the joint, center line and contour of the face of the die. You will note that each of the floral patterns are furnished in a left and right cutting die. (See illustration.)

On the face of each cutting die, there are numbers 1 through 12 in clockwise direction on the first 180 degrees. These numbers 1 through 12 are continued in a counter-clockwise position through the second 180 degrees. The purpose of these numbers is to help you locate the cutting die in its proper rotational position.

In the illustration, please note that the cutting die has been located in what is called a 3-3 vertical position. This means that a vertical line passing through 3-3 on the cutting die is parallel to the center line of the stone.

Some of the cutting dies do not have the numbers 1 through 12, because in most cases they are used in the vertical position. In all cases the designs can be rotated to other angles to suit your own desires.

Locating the horizontal line from the bottom of face, and the vertical line from the center — you first lay the left cutting die in the left hand corner and rotate it to the correct angle. In this case you would mark the vertical position 3-3 and horizontal position 9-9, and this will give you the location of the horizontal line from the bottom and the vertical line from the center, therefore giving you the exact position of the right hand cutting die.

There may be other methods of locating position of cutting dies that will work just as well.

These cutting dies can be used for single, double-process or flat carving.
