

COVET BROWS

BROWS ONLY

5 DAY COURSE

Learn Micropigmentation Hairstroke
& Ombre Brow Technique

Additional 2 day attendance required 1 month later for student retouches

This program

is designed for beginners to Micropigmentation. The 5 day course will cover Health and Safety through to Brow templating and application of Hair-stroke and Ombre Brow Micropigmentation techniques. After completion of this course you will still need to practice as much as you can. We advise not to practice on people immediately but continue to build your technique by practicing on paper and latex skins. Once your technique is solid your confidence and skill will show when performing Micropigmentation on your clients.

After this course we would like you to join our Private facebook group. Here questions can be asked, students can discuss and problem solve with each other and admin. Your work can be uploaded and showcased. Product knowledge will continue through our student forum as ongoing support and education. So many situations and outcomes will arise through a career of Micropigmentation. It is impossible to filter this into any one course so the Group forum is a great place to come for resolution, experience and problem solving from each others work. We highly recommend joining.

Micropigmentation is not simple, it requires commitment, hard work and persistence. Be stubborn and determined to develop your new skill and people will come to trust your work. Micropigmentation procedures filter in Skin types, client situations and preferences, art, symmetry and preparation. Different situations will arise for every client, in this industry you will always be learning and can never know enough. A good start with a fundamental beginner course will open the door for new comers to join in on this ever growing industry.

What is Micropigmentation:

Micropigmentation also known as Permanent Makeup, Cosmetic Tattoo and Semi Permanent Makeup is a form of tattooing for cosmetic purposes. Pigment is deposited into the Dermal layer via skin penetration of needles. With Micropigmentation we can compliment and beautify our clients facial features thus simplifying and in some cases totally cutting out the time they spend daily applying makeup.

Program
