

1. Low Symptomology (below 63 GSI) = + & High Spirituality (above 60.4) = + = Best initial case prognosis.
2. High Symptomology (above 63 GSI) = -- & High Spirituality (above 60.4) = + = 2nd best initial case prognosis
3. Low Symptomology (below 63 GSI) = + & Low Spirituality (below 60.4) = -- = 3rd best initial case prognosis.
4. High Symptomology (above 63 GSI) = -- & Low Spirituality (below 60.4) = -- = 4th best initial case prognosis.

Patient/Client Category #	Symptom Level/ SCL-90-R	Spirituality/God Image Inventory	Prognosis	Treatment Length (Estimated) ¹
#1 (Based on 39 patients)	Low GSI < 63 Positive	High AVE. > 60.4 Positive	Highest = Positive + Positive	3-6 Months 6.7 month avg.
#2 (Based on 21 patients)	High GSI > 63 Negative	High AVE. > 60.4 Positive	2 nd Highest = Negative + Positive	6-12 Months 9.4 month avg.
#3 (Based on 13 patients)	Low GSI < 63 Positive	Low AVE. < 60.4 Negative	3 rd Highest = Negative + Positive	6-12 Months 11.6 month avg.
#4 (Based on 17 patients)	High GSI > 63 Negative	Low AVE. < 60.4 Negative	4 th Highest = Negative + Negative	12-15 Months + 7.7 month avg.

- Must Factor in Issues (number and severity) and Personality (Type) as additional outcome variables.

¹ Treatment length is time it takes to go from current category to a Category 1; or if a Category 1, staying a Category 1.
