Nuggets of News and Knowledge

February 2023

Whether you are new to gold prospecting or an experienced old-timer, whether you have just started swinging a metal detector or have been digging targets for years, get the most out of treasure hunting with these nuggets of news and knowledge— tips, ideas, new products and more!

Winter Gold Prospecting in the Desert SW

If you're ready to head to a sunnier climate this winter to do some desert prospecting, understanding the weather and topography can add to your success.

Before loading up and heading to the Southwest, only to be disappointed by bad weather, first check out the weather patterns for the last 60 days and the predicted weather for the next 30-60 days.

Why is that important? Well, it mostly comes down to rainfall— how much and how fast. For example, if there will be a lot of rainfall over an extended time, soils will be loosened and gravity will do its job and cause deeper, and sometimes more concentrated, pay streaks. In general, cool season precipitation (October through April) is the most extensive source of rain in the desert regions. Rainfall is more widespread and of relatively long duration during the cool season. On the other hand, warm season precipitation (May through September) results largely from convective precipitation in the form of short monsoon-type thunderstorms.

There are three major desert areas that make up the American Southwest. The roughly 200,000-square-mile Chihuahuan Desert stretches from the southeastern corner of Arizona across southern New Mexico and west Texas to the Edwards Plateau. The Chihuahuan Desert is the most moderate of the three deserts, made up of low and high desert regions and grasslands. It sees the most rain on a regular basis throughout the year with anywhere between 8-12 inches, and areas in New Mexico receive up to 17 inches per year. Unfortunately, because of the Chihuahuan Desert's higher altitude in southern New Mexico, and the rain patterns there, winter prospecting is a real challenge, especially dry washing.

The Sonoran Desert occurs primarily in Mexico. In the USA, most of it can be

What is an Electroscope?

An Electroscope is a different kind of metal detector technology. It is an electronic locator that will recognize the presence of metals from a long distance, up to two miles away on sizeable targets. These fine instruments can aid treasure hunters by providing a direction and an approximate location where treasure might be buried, then you can finish off your recovery of gold, coins, relics, and more using a conventional deep seeking metal detector. Hunting for nuggets, veins, and paystreaks in highly mineralized areas is a natural application for these custom designed instruments. Cover more ground in less time and increase the chance of making a recovery-- after all, the goal of all treasure hunters is to be productive! [More about electroscopes here.](#)

Pocket Sluice Kit

found in the southern third of Arizona, with small areas in southeastern California. [Article continues here...](#)

NEW! Gold Pup Highbanker

The NEW Gold Pup Mini Highbanker is a two stage high banker that really catches fine gold. This unit comes with a 12 volt 1100-gph pump, 3 feet of recirculating hose, built-in spray bar and has adjustable legs for easy slope control. Sluice is 26 inches long x 6.5 inches wide with miner's carpet and hinged Hungarian riffles. Top hopper is 14.5 inches long x 6.5 inches wide. Perfect size to fit in a plastic tub (not included). All you

need is a 12 volt lawn mower battery and a small pail to catch the waste rock and you'll be ready to use the Gold Pup Highbanker in the desert, in your favorite stream, or at home. Light enough to pack in on longer hikes. Efficient, sturdy aluminum unit built in the USA! [Gold Pup photos and details here.](#)

Have You Tried a Dream Mat Sluice?

10 x 35" Sluice with Vortex mat

The Dream Mat has been scientifically engineered and designed using advanced fluid dynamic principles and physics. The mini Hydro-Cyclone inspired vortex cells

classify, separate, capture and hold gold naturally. Dream Mats vortex cells exploit nature's own forces in a patented system to bring the finest gold recovery ever created. These mini cells are engineered to capture the finest gold without needing huge amounts of water to maintain good exchange. Big gold is really heavy and Dream Mat captures and holds the bigger gold in its vortex holding cells, just like it does with fine gold. Choose from 2 different mats - both made of polyurethane (not cheap rubber or silicone!). [Mini Dream Mat](#) is ideal for sandy areas and black sands. Great for 1/4"-3/8" screened runs. Catches the gold everyone is missing! [Vortex Dream Mat](#) is the original Dream Mat that's great for both large and fine gold recovery— less cons, more gold, instant clean out. Several sizes to choose from. Made in the USA.

Paydirt Delivered to Your Door This Winter

Looking for a light weight sampling or clean up kit? This Pocket Sluice Kit weighs less than 1 pound, so it's easy to take anywhere. Kit includes: 12" long x 3.5" aluminum sluice, plus bright orange hand trowel, plus tweezers, plus 2 glass vials. Grab-n-go size; all items are self-contained in 1 box.

[Pocket Sluice Kit found here.](#)

Hand Dredge + Accessories

Gold can hide down in the deepest part of a crack or crevice or behind a boulder and often is best reached with a hand dredge. This gold prospecting tool is ideal for working below the water line to help you get the gold out of some really tight spaces. Also check out the many accessories that make your [hand dredge](#) even better!

Gold Cube + Accessories

If winter weather is keeping you indoors these days, you can still FIND GOLD now by ordering paydirt from Alaska or Colorado. These bags are ideal for practicing your panning skills at home, or to use with a new piece of equipment. Since you KNOW FOR SURE that good gold and/or gems are found in these bags, you'll be able to improve your skill by panning the same bag over and over again. Same holds true for perfecting your gold recovery skills using your equipment. Pan over and over again for fun, or collect what you find and display in a vial. Ideal gift to give kids or anyone else a bit of GOLD FEVER! [Shop Alaska paydirt](#) here. [Colorado paydirt found here.](#)

History Nugget: California Gold Rush

"Boys, by God, I believe I've found a gold mine," said James Marshall to his mill workers on January 24, 1848 after he discovered gold in the tailrace of John Sutter's sawmill at Coloma. This discovery started the epic California Gold Rush, and as they say, the rest is history. To get a good sense of that early history, visit the Marshall Gold Discovery State Historic Park, located on the South Fork of the American River. Created in 1942, the

park encompasses most of the historic town of Coloma, a number of historic buildings and sites, and a Gold Discovery Museum. You can also try your luck at gold panning, see living history demonstrations, watch skilled blacksmiths at work, and tour the park at your own pace. A full-size replica of Sutter's sawmill is the park's centerpiece, helping visitors imagine how the discovery of those first dew flecks of gold drastically changed the lives of hundreds of thousands of people.
