

# **ALLOY HARDFACING**

*Evolving to meet YOUR Needs....*

## **Vibratory Screens**

Alloy is proud to offer our customers vibratory screens in a wide range of sizes, configurations and materials to meet their applications. Whether you are looking to separate solids from liquids or you are looking to separate different sizes of solids, Alloy can help you choose a screen that will meet your needs at an affordable investment.

Vibratory screens offer many advantages. They have a very small footprint saving floor space in your facility and they operate with minimal horsepower keeping operating expenses to a minimum.

Screens can be configured to make a single separation with a single “deck” or to separate several different sizes simply by adding additional decks and screens.

Screen performance can be “tuned” for your specific needs using the adjustment plates on the Alloy screen.

This Screen is being used ahead of a fat centrifuge to reduce the solid content by nearly 50%. The screen improves centrifuge performance while significantly reducing the wear on the centrifuge.

This Screen is being used following a hammermill to assure all finished product is sized to meet market requirements.
